

FAMM® HS

AV Flexologic proudly introduces a new Fully Automatic Mounting Machine (high speed) for the narrow web.

This machine belongs to the top range of AV Flexologic's mounting machines for mounting flexographic photopolymer printing plates onto cylinders.

The **FAMM® HS** excels in:

- Mounting speed
- Repeatability
- Consistency
- Accuracy

Operation

The system is equipped with interactive cameras. These will move to set position, look for the mounting marks and, with the interaction between cameras, computer and manipulator, will see to it that the plates are taken to the right mounting position, after which the plate is mounted onto the cylinder.

A carousel in the **FAMM® HS** holds **10 cylinders** with different repeats. It only takes 90 seconds to mount a plate on a cylinder!

Now for narrow web:

FAMM® HS with Carousel

After mounting, the positions of the plates are confirmed and will be stored. The plate will always be mounted within the set tolerances.

Using the **FAMM® HS** eliminates all mounting mistakes and increases accuracy and efficiency in the pre-press department considerable.

Technical Details

- Max. cylinder repeat: 1000mm
- Max. cylinder printing width: 700mm

FAMM® success stories

AV Flexologic will install a total of **nine FAMM®s** in 2011!

If you want more information on the FAMM®, do not hesitate to contact us at av@flexologic.nl, or call our office at +31 172 434 221.

We innovate!
